

## Somaliland Weekly Weather Forecast 28 May to 3 June 2025

Issued: 29 May 2025

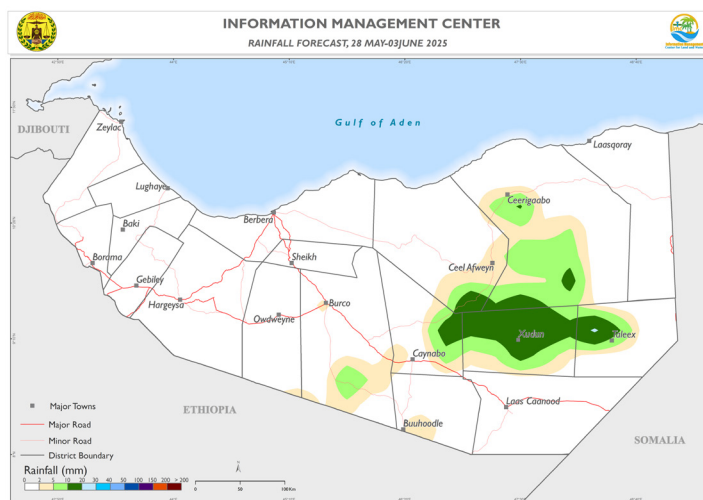

**Dry conditions are expected to persist across most parts of Somaliland. However, localized light rainfall is likely in parts of Sool, Sanaag, and Togdheer regions, particularly over Xudun, Taleex, Caynabo, Buuhoodle, Ceerigaabo, and Ceel Afwayn districts.**

### Rainfall Forecast (28 May and 3 June 2025)

For the upcoming week, the NOAA-NCEP GFS model forecasts generally dry conditions are expected to prevail over large parts of central and western parts Somaliland. Light rainfall of less than 50 mm is likely over select areas of Xudun, Caynabo and Taleex districts in Sool region, Ceerigaabo and Ceel Afwayn districts in Sanaag region, Buuhoodle and southern parts Burco in Togdheer region. Light rains of less than 10 mm are likely in the neighborhood of these areas extending over to Buhoodle district in Togdheer region.

The spatial distribution of the forecast rainfall (Map 1) is as follows:

- **Light cumulative rainfall of less than 50 mm** is expected in Taleex, Caynabo and Xudun districts in Sool region, few parts in southern parts of Burco and Buhoodle districts in Togdheer region and Ceerigaabo and Ceel Afwayn districts in Sanaag region.
- **Dry conditions** are likely to prevail over most parts of Awdal, Maroodijeex, Saaxil and Togdheer regions.

### Impacts Associated with the 21 to 27 May 2025 Weekly Forecast

Last week (21–27 May), most areas remained dry, accompanied by intensely high temperatures.

For this week:

- Continued dry and hot conditions are likely to increase evapotranspiration, reducing topsoil moisture.
- These conditions may hinder crop performance and fodder regeneration, especially where Gu rains had started earlier in May.
- Water conservation and fodder protection measures are recommended to mitigate moisture loss and support livestock.
